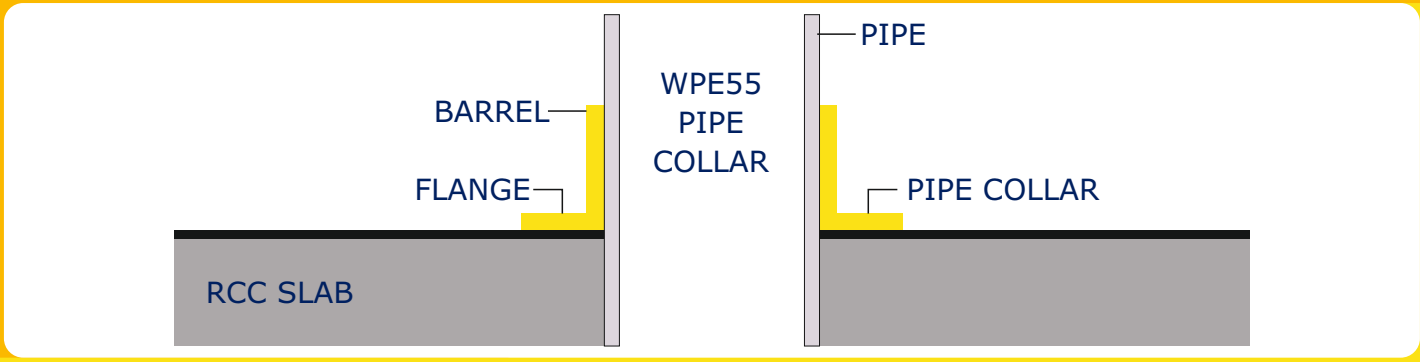
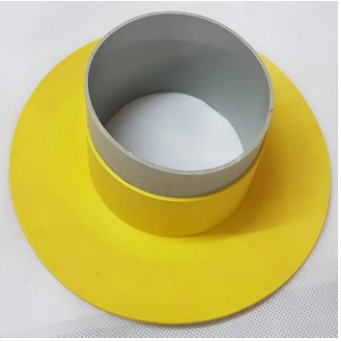
WPE55
PIPE COLLAR (CORE CUT)



Core cut packing is one of the preparatory works for waterproofing. This is to be ensured in Plumbing and Electrical penetrations. For example, Bore packing will be done for plumbing lines that are crossing the RCC members in toilets.

WPE55 PIPE COLLAR around Plumbing/Electrical Pipes can save from seepage/Leakages

Core Cut packing is the process of fixing Plumbing pipes in RCC members (Slabs or beams or RCC walls) in their cutouts / core cuts.



WPE55 PIPE COLLAR (CORE CUT)

WPE55 PIPE COLLAR (CORE CUT) Yellow Colour is developed to arrest the water leakages through the core cut done in the slab. Once the core is done, insert the WPE55 PIPE COLLAR on the Outer Dia of the Pipe. Apply the glue to the bottom of the WPE55 Pipe Collar Flange and fix it to the slab. Apply the glue on the TOP side of the Flange sprinkle sand to make it compatible with any cementious screed/mortar/tile adhesive etc.

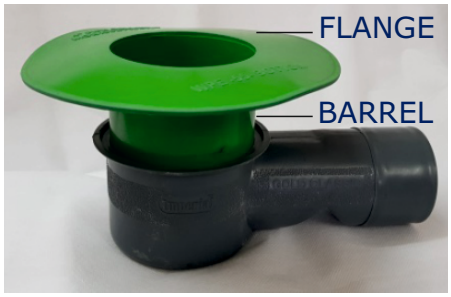
WPE55
NANI TRAP (DRAINAGE)

WPE55 Pipe Collar for Nani Trap (Drainage System) is developed to arrest the water leakage / seepage through the inside portion of the bedding material above the Nani Trap. After placing of the Nani trap on the floor, the bedding material (Machan) is casted to maintain the slope, but the inside portion of the bedding material, i.e the inside portion between nani trap and bedding is NEVER waterproofed, this is source of leakage/seepage. Our WPE55 Pipe Collar completely seals/Covers this gap and allows to flow into the Nani Trap. To fix the WPE55 Pipe collar use Synthetic rubber Glue at the BOTTOM of the flange. Again apply Synthetic rubber glue on TOP of the flange and sprinkle sand to make it compatible with any cementious surface, and then fix the tiles around the WPE55 Pipe Collar.



Place the WPE55 Pipe Collar adjusting the height of the bedding material

Shows that the Inside portion of the bedding is covered with barrel of WPE55 Pipe Collar

Ready for tilling
